

## What's New At The Wrong Number Family Of BBS'

---

05/26/2024 – I haven't updated this website as you can see in well over a year!! Tonight though I did update a few things, I have updated the Image BBS Support section with the latest downloads of my BBS on A Stick project and the latest Image BBS 3.0 master disks. I have also updated a few other pages since the last time I updated this page. There is now 2 different links to the BBS' I run. On the top of this page you will see Telnet to PC/Amiga BBS' and Telnet To CBM BBS', if you click on the PC/Amiga link you will see a fTelnet option to login to my login menu which will get you to ALL of my BBS' including the CBM BBS' but the CBM BBS' will log you in with ANSI color graphics. If you click the CBM Link you will see 2 login options, one for Wrong Number IV and one for Wrong Number VI. These fTelnet options will log you in with Commodore Color Graphics in 40 column mode. I will update this file again soon with all of the other things that have changed since the last time this file was updated.

11/12/2022 – Over the past several weeks a lot has been taking place with all of the BBS' Both the Mystic BBS (Wrong Number ][) and Synchronet (Bucko's Den) have been migrated over to Linux (Debian 11). The Door Server has been updated to Synchronet 3.19b. Unfortunately, Bucko's Den II (Enigma .5) has been taken down due to lack of use.

10/01/2022 – I have reset BRE, Yankee Trader, Falcon's Honour, Tradewars 2002 was reset a few days ago. If there are other games you want to see reset please leave me some email.

DuckDNS seems to be having issues today (10/1/2022) and the Door Server seems to not be able to be accessed from the outside, the BBS's seem to be working as does the website although slower then normal. I will post when it is back to normal. Have to be honest, this is the first outage I have experienced since I got on DuckDNS back in 2018, so I can't complain..

If you can't access the BBS' you can use my backup DNS server at wnbbs.dynu.net then add the ports of the different BBS' you want to log on to.

09/03/2022 – A lot has been going on over the past several months with the BBS' Wrong Number ][ C-Net Amiga software has been updated to v5.34b. Wrong Number ][ Mystic Software has been updated to A48, Bucko's Den SynchroNet has been updated to the latest Nightly version, as has Bucko's Den II Enigma Software. I found 49 disks of Amiga Telecom files from the Genie Telecom RT when I Was the SysOp there and have uploaded all of the individual files to the Wrong Number ][ File Library and The Wrong Number ][ File Library. A lot of other things behind the scenes has also taken place for security purposes. I have opened up port

2022 on The Wrong Number ][ BBS as a SSH connection. There's more going on in the background so stayed tuned...

03/26/2022 – We now have a domain name, if you accessed the webpage through the address wnbbs.duckdns.org it has now changed to [www.wrgnbr.com](http://www.wrgnbr.com) the old address automatically sends you to the new domain. All of the BBS' have also changed now to the new domain they are as follows:

wn2.wrgnbr.com:23 Mystic BBS

wn3.wrgnbr.com:6400 CNet Amiga BBS

wn4.wrgnbr.com:3000 Image BBS for the C64

bdbbs.wrgnbr.com:6401 SynchroNet BBS

bd2.wrgnbr.com:6800 Enigma ½ BBS

The duckdns.org addresses will stay active for the foreseeable future but will be shut down eventually.. So make the changes now before you get shut out!

02/19/2022 – Thanks to Gigino and XLar54, CNet 10.0 now is Y2K and Swiftlink compatible so the original Bucko's Den is now online again. I will be updating the software with mods that either I wrote or friends of mine wrote from back in 86-87. I will also be releasing these mods over the coming weeks.

The Door Server is well over 140 games now, and getting larger by the day.

07/04/2021 – I am in the process of upgrading the software the Door Server runs on from SynchroNet 3.17b to 3.18b. What this will do is also allow in the coming months Commodore Color Graphics users to be able to use the Door Server with their CG Terminals without having to log on with a ANSI terminal. The Door Server will truly be a one stop shop for all gaming needs.. If you want to see a Online Game/Door added to it please don't hesitate to ask me to add it. If you want to contribute and register the door I will not turn it down.. ☺

In addition to the above, over the next several months I will be evaluating all of my BBS' to see if they are being used, or just wasting space. It is conceivable that 1 or more will be taken down OR combined into different software which gives me the added possibilities of adding to the Family!

06/26/2021 – Not much has been going on over the past few months, Wrong Number IV has been undergoing a lot of changes from new Online Games, to modifications to one of a kind brand new files being written by myself. It's been a while since I wrote any software for Image BBS and it has felt good. I am also adding in older files with a new kick they are fully 40/80 column compatible.

The Door Server has a new door added Yankee Trader, along with a couple of new boards which are hooked up to it. If you would like to get your BBS hooked up to it click the link for info on the Door and File Servers..

01/29/2021 – Lots of things going on over the past 2 months. Bucko's Den (Image 2.0 BBS) was taken down due to lack of use. The Wrong Number V (Image 1.2 BBS) was also taken down not due to lack of use but to more streamline the Family of BBS' and allow for my free time to be better spent on boards that are more up to date then others. I have also been playing with a CNet128 board v7.2+ for a friend. I haven't decided yet if I will be keeping it for myself or giving it off to him. Give it a call at twbbs.ddnsfree.com:6428 It is 1 of only 2 CNet 128 boards running that we know of and running in Emulation. In the coming months I intend to expand the Door Server with more Doors and hook up other BBS' to it so there is more players in the games.

12/05/2020 – The Wrong Number ][ BBS (wn2.duckdns.org:23) has been undergoing a lot of menu work over the past week. I will most likely have the new cursor driven menu's up and running in about a week. At that point I will devote time to adding in more doors to the Door Server.

I have also changed the FQDN addresses for all of the BBS', you can still reach them via the wn2.duckdns.org:port but now they are as follows:

The Wrong Number ][ BBS – wn3.duckdns.org:6400

The Wrong Number IV BBS – wn4.duckdns.org:3000

The Wrong Number V BBS – wn5.duckdns.org:6407

Bucko's Den BBS – bdbbs.duckdns.org:6407

Bucko's Den II BBS – bd2.duckdns.org:6800

If you come across any that do not work please let me know..

11/05/2020 – As of today Bucko's Den is now running on a Emulated 4.1gig CMD Hard Drive in WinVice. The Wrong Number IV is currently being run from a Emulated Lt Kernal Hard Drive also in a WinVice setup. Although, that will be changing to a Emulated CMD Hard Drive the

same as Bucko's Den so I can take advantage of the SuperCPU emulation speeding the BBS up to 20mhz! There's still a lot more to come!

10/03/2020 – Updated the website a bit, did some upgrades on the Image BBS v3.0 (Wrong Number IV BBS) It is getting more and more difficult to determine if that BBS runs on a C64, a C128, Amiga or PC! The screens all center now in 40 or 80 columns. Including 90% of the text of the BBS program! There's more where this came from'!! A LOT more!!

09/18/2020 – The website you are looking at has been updated with this page that you are currently viewing. On the BBS front, Image BBS v3.0 is getting closer and closer to release. The latest is it now detects ANSI mode correctly and there is no need to answer questions when connecting...
